

# Software Quality Assurance Lead

---

## Enseo

For more than 21 years, Enseo has been known as the backbone of the hospitality in-room experience. The company's superior products, including set-back boxes and applications, are preferred by the world's largest hotel groups. Enseo is a dynamic and fast-paced technology provider that is transforming industries with emerging digital products. We are always on the lookout for world-class talent with a passion for exceeding expectations. Is that you?

## General Description

The Software Quality Assurance Lead primary responsibilities include leading a team performing quality assurance testing of new software, developing automation software, and documenting test results and maintaining a library of updated test plans and procedures. The Software Quality Assurance Lead will also have a minimum of 10 years' experience of developing test methodology, test automation software and working experience on a variety of software applications such as Linux, iOS, Android and embedded systems. We are seeking candidates local to the Plano, Texas area.

## Skills

- Do you have a Bachelor's in computer science, focusing on the software quality assurance?
- Do you have a sound understanding of software testing methodologies and applying software testing methods and techniques to a variety of technologies?
- Do you possess excellent critical thinking (inductive, deductive and quantitative reasoning) and problem-solving skills including data analysis and validations?
- Can you demonstrate analytical skills by identifying and objectively evaluating innovative and alternative solutions to problems?
- Do you have experiences in building test framework/harnesses and using Linux based devices?
- Do you have a solid understanding of TCP/IP networking and Linux based network tools?
- Do you have the leadership skill of leading a team of testers and test automation software developer?

## Responsibilities

- You will develop test methodologies, software testing plans, automation software and procedures on software products including embedded systems, web applications and mobile applications.
- You will provide coaching and guidance to your team, managing the schedules and workloads.
- You will Identify anomalies, investigate, and file clear and detailed bug reports; assist in correct escalation of bugs with peers and management as needed.
- You will establish regular, clear and precise communication with the engineering team and management regarding executed tests and observed issues.
- You will adhere to company policies and procedures.
- You will perform other related duties as assigned.

## Benefits

We value our employees' time and efforts. Our commitment to your success is enhanced by our competitive pay and an extensive benefits package including paid time off, medical, dental and vision benefits. Plus, we work to maintain the best possible environment for our employees and strive to provide a collaborative, creative environment where each person feels encouraged to contribute to our processes, decisions, planning and culture.
